Ex Parte Quayle Action

This application is in condition for allowance except for the following formal matters:

The specification is objected to as failing to provide proper antecedent basis for the claimed subject matter. See 37 CFR 1.75(d)(1) and MPEP § 608.01(o). Correction of the following is required: There is no antecedent basis in Claims 5-6 and 10-11 for the claim terms “first interior circular edge”, “first exterior circular edge”, “second circular exterior edge”, and “second circular interior edge”.

Page 6 Line 23 of the specification refers to Figure 5, which has not been submitted by the applicant.

The abstract is object to because on the 5th line there appears to be a spelling error. The term “an” should be replaced by –and--.

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, as recited in Claims 5-6 and 10-11 “first interior circular edge”, “first exterior circular edge”, “second circular exterior edge”, and “second circular interior edge” must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.

Allowable Subject Matter

Claims 1-4 & 7-9 are allowed.

Claims 5-6 & 10-12 have allowable subject matter, however are objected to because of the informalities mentioned above.

As allowable subject matter has been indicated, applicant's reply must either comply with all formal requirements or specifically traverse each requirement not complied with. See 37 CFR 1.111(b) and MPEP § 707.07(a).

Reasons for Indicating Allowable Subject Matter

The following is an examiner's statement of reasons for allowance: with regard to Claims 1 and 7, the prior art does not teach or suggest a lighting system having a condensing lens, a circular annular reflecting mirror, and a parabolic reflector wherein the parabolic reflector has a circular opening positioned on the optical axis of light emitting diode which directs the light away from the condensing lens and the reflected light being received by the circular mirror which then reflects the light 180 degrees essentially parallel to the optical axis of the LED.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Fortney (US Pat 1,883,360) discloses a catadioptric headlight assembly. Young (US Pat. 6,672,741) discloses a parabolic light emitting diode reflector. Webb (US Pat. 5,309,339) discloses a parabolic reflector with a circular opening, which could be centered on an optical axis of a light source.
